

## Activity Sheet: 5 - Sedimentation & Nutrients

### 1 Testing Water Quality

- Test water quality in the following situations:

1. Straight from the tap.
2. Water flowing over the quadrangle.
3. Water flowing over the school car park.
4. Water sample taken from Lake Macquarie.

---

---

---

- Students to write a report on the differences in results between the different surfaces.

---

---

---

---

---

---

---

- Relate the findings of the experiment to different levels of water quality found throughout Lake Macquarie.
